

SAI RAJARAM J

AI & Data Science Student | Full-Stack Developer | Machine Learning Enthusiast

sairajaram0906@gmail.com | Chennai, Tamil Nadu, India | [linkedin.com/in/sairajaram](https://www.linkedin.com/in/sairajaram) | github.com/SaiRajaram0906 | Portfolio

PROFESSIONAL SUMMARY

Second-year B.Tech student in Artificial Intelligence and Data Science with hands-on experience across machine learning, full-stack web development, and database design. Built and shipped six end-to-end projects spanning AI-powered platforms, fraud analytics, and relational database systems, alongside a completed machine learning internship covering the full data science workflow. Strong foundation in Python, JavaScript, SQL, and the MERN stack, with a proven ability to translate problem statements into working, scalable solutions. Seeking a Software Development, AI/ML, Data Science, or Full-Stack Development internship to apply technical skills in a real-world, fast-paced engineering environment.

EDUCATION

B.Tech, Artificial Intelligence and Data Science

Jun 2024 - May 2028

Rajalakshmi Engineering College, Chennai

Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Management Systems, Operating Systems, Software Construction

Higher Secondary Education (12th Grade)

Completed

Jeya Jeya Matriculation Higher Secondary School, Nagapattinam - Percentage: 90.33%

TECHNICAL SKILLS

Programming Languages: Python, Java, C, C++, JavaScript, SQL

Frontend Technologies: React.js, HTML5, CSS3, Bootstrap, Tailwind CSS

Backend Technologies: Node.js, Express.js, Socket.IO, REST APIs

Databases: MongoDB, MySQL

Tools & Platforms: Git, GitHub, Google Maps API, VS Code

AI/ML Technologies: Scikit-learn, Pandas, NumPy, Supervised Learning, Feature Engineering, Model Evaluation

PROJECTS

ParkEase - AI-Powered Smart Parking Platform

Tech Stack: React.js, Node.js, Express.js, MongoDB, Google Maps API

- Developed a full-stack smart parking platform connecting drivers with available parking spaces, including unused private residential spots.
- Implemented real-time availability tracking, AI-based recommendations, and map-based navigation using the Google Maps API.
- Designed secure end-to-end booking and payment workflows, building a scalable solution to reduce urban traffic congestion.

FinSentinel - Fraud Intelligence Platform

Tech Stack: React.js, Node.js, Express.js, Socket.IO, Tailwind CSS

- Built a real-time fraud detection and risk intelligence platform for monitoring financial transactions.
- Implemented risk-scoring algorithms and live threat-level analytics dashboards using Socket.IO.
- Developed privacy-preserving data-sharing mechanisms to support collaborative fraud detection across entities.

Cardiovascular Disease Prediction System

Tech Stack: Python, Scikit-learn, Pandas, NumPy

- Developed and evaluated multiple supervised ML models to predict cardiovascular disease risk from patient data.
- Performed end-to-end data preprocessing, feature engineering, and exploratory data analysis to improve model inputs.
- Compared algorithm performance using precision, recall, and F1-score to identify the most effective model.

Smart Helpdesk System

Tech Stack: HTML, CSS, JavaScript, Bootstrap

- Developed a web-based helpdesk platform for students to report and track campus-related issues.
- Designed responsive, accessible interfaces to streamline complaint submission and resolution tracking.

Timetable Management Website

Tech Stack: HTML, CSS, JavaScript

- Built an interactive web application for organizing and visualizing academic timetables.
- Designed a responsive, intuitive interface accessible across desktop and mobile devices.

Library Management System

Tech Stack: MySQL

- Designed and implemented a relational database system to manage library inventory and circulation.
- Created stored procedures and triggers to automate inventory updates, reducing manual data-entry errors by 20%.

EXPERIENCE

Machine Learning Intern - Corizo

May 2025 - Feb 2026

Remote

- Completed an end-to-end data science workflow for a Cardiovascular Disease (CVD) prediction project, from raw data collection through final documentation.
- Performed data cleaning, preprocessing, and feature engineering, then trained multiple supervised learning models to evaluate predictive performance.
- Documented the complete project workflow and evaluation results for reproducibility.

Marketer - Enactus

Oct 2025 - Present

Rajalakshmi Engineering College

- Collaborate with a cross-functional student team to design and execute marketing strategies for social impact initiatives.
- Strengthened communication, teamwork, and leadership skills through hands-on project execution and stakeholder outreach.

CERTIFICATIONS

- LeetCode 150 Days Badge - Consistent algorithmic problem-solving practice
- Deloitte Data Analytics Job Simulation

ACHIEVEMENTS

- Participated in Inventa'25
- Robovanta - a Tamil Nadu state-level hackathon
- Contributed to "Academic Content Generation by Aadhi," an AI-powered Learning Management System (LMS)
